

Tough Decisions – Smart Solutions

What if one company's software products could handle all your decision analysis, from business development, exploration and development to cost tracking? Would you want them? Yes. Would you need them? Absolutely. What if you knew that companies representing over two million BOEPD of production are already taking advantage of these products? Read on, and learn about how Energy Navigator Inc. (ENI) helps you to make better business decisions and improve your bottom line with their state-of-the-art software tools.

A rapidly growing Calgary firm, ENI will help you chart your course through today's changing waters. They take a fresh look at the oil and gas industry's longstanding challenges and address them with cutting edge software solutions. These fast, easy-to-use solutions were designed with the overall business cycle of an oil and gas company in mind, and cover:

- Gathering of Project Opportunities
- Risk evaluation
- Capital planning (budgeting, tracking)
- Exploitation and production engineering
- Acquisition and divestiture evaluation
- Reserves management
- AFE Creation, Routing, Approving and Tracking

It is their vision to integrate these processes that makes ENI so unique.

GETTING YOU THE RIGHT ANSWERS

ENI's unique, integrated software enables you to pinpoint the answers to critical questions such as: spending commitments, current reserves and production, and whether you are meeting or exceeding forecasted targets. ENI's intuitive software has been designed with your workflow in mind. Industry veterans provide valuable design input based on their real-world experience. And if the products do not have the report you need, the open database structure gives you easy access to all of the program's input and output. All this is combined to provide quick, accurate results.

CAPTURING THE MARKET

As a result of its dedication to quality and customer service, Energy Navigator, a relative newcomer to the energy software

business, has captured significant market share in the past two years. Companies are consistently choosing ENI software after evaluating all available options. Since its inception in 1998, Energy Navigator Inc. has grown to a 17-employee firm, adding four full-time employees in the past six months alone. Over 50 companies representing more than two million BOEPD of production are using ENI software.

ONE SOFTWARE COMPANY. ALL THE TOOLS YOU NEED

Why are you paying for several software packages to handle your evaluation needs?

Where you once needed several packages to meet your needs, now you only need one. Value Navigator™ is a fully-integrated evaluation package that combines rigorous reservoir engineering methodology, automated decline analysis, a fast and accurate economic engine, and full reserves management tools into one intuitive, cost-effective program. The tool is designed to solve longstanding problems faced by industry. It integrates the data between reserve, economic, and decline applications — eliminating redundant data entry. Most importantly, Navigator™ is based on a solid foundation of reservoir engineering fundamentals to ensure accurate evaluation results.

ENI emphasizes quality in their products and also makes customer service a top priority, recognizing that Value Navigator™ is a critical tool for people who don't always work 9 to 5. Our technical support professionals are available 24 hours a day, 7 days a week!

GET VALUE NAVIGATOR™ WORKING FOR YOU!

It's no wonder that clients are positive about Value Navigator™. "This software allows me to monitor the engineering process at any time, report on reserves from any level in the corporation, and see the decline, material balance and volumetric reserve forecasts on one graph for easy comparison," one user says.

In the fall of 2003, look for the newest release of Value Navigator™ that will add the following features:

- Decision Tree with full cycle or go-forward risk analysis.
- Multiple Companies/Affiliates to create working interests and burdens for any number of user-defined company entities.
- Custom Regimes (domestic and international) to define special royalties, burdens, taxes or production sharing contracts.
- Custom Decline Graphs to create your own decline analysis graphs in addition to the 12 pre-defined graphs.

HANDLING ALL YOUR CAPITAL COST TRACKING

AFE Navigator™ brings a new level of efficiency, control, and accountability to capital cost tracking. A unique program, AFE Navigator™ allows clients to electronically create, route, approve and track all of the company's authorizations for expenditure (AFE). In addition, the software allows you to report on your capital spending commitments at any time. ENI is constantly refining the AFE Navigator™ capital-tracking tool; its most recent release allows users to report on multiple parents/affiliates separately or as a group. Similar to other ENI products, AFE Navigator™ is built on an open database structure enabling data sharing between software packages.

GET AFE NAVIGATOR™ WORKING FOR YOU!

AFE Navigator™ saves its users a significant amount of time. As one client says: "It allows me to log in and quickly see what stage the AFE is at in the approval process." AFE Navigator™ also makes it easy for approvers to log in and obtain the information they need from the AFE and linked files. Another user states: "With AFE Navigator™ I can quickly report on all of my AFEs that are over the original estimate by 10 per cent — helping me to identify potential problem areas!"

So if you haven't already, give Energy Navigator a call, and find out how we can help you make better business decisions! ■

Shed **new light** on old problems...

At Energy Navigator, we know generating your annual reserve and capital spending reports can be time consuming. That's why we've designed tools to help make it easier. Imagine a reserves program that allows you to see where you are at every phase of your journey; a capital tracking tool that clearly shows your capital spending commitments – any time. We recognized that a fresh look was needed to help solve old problems.

A F E  **navigator**
CAPITAL TRACKING SOFTWARE

A unique software tool that allows you to electronically create, route, approve and track all of your company's AFEs. AFE Navigator™ is designed to give you the information you need to make the best decisions for your company. Bring a new level of efficiency, control and accountability to your capital tracking system.
